Subject: CFAC Building 1 Reuse, Repurpose, and Recyclable Waste Determination
Summary Report Review [EPA ID No. MTD057561763; FID 2386]

Dear Messrs. Wright and Boyd:

On January 12, 2016, the Montana Department of Environmental Quality (DEQ) received the final Columbia Falls Aluminum Company (CFAC) Building 1 Reuse, Repurpose, and Recyclable Waste Determination Summary Report (Report). The purpose of this Report is to verify that there is no hazardous waste on the reuse, repurpose, and recyclable materials ("reusable materials") in Building 1. The Report includes information on testing of dust and debris which have the potential to contaminate the reusable materials with hazardous waste. This Report is a required component of the Waste Management Plan (Plan) which is required per the Administrative Order on Consent (AOC), Paragraph 18.

DEQ has reviewed and approved the Report subject to the following :

1. This approval only allows removal of approved materials, as listed in the Report, from Building 1.
2. No hazardous waste may be removed from Building 1 until the Plan is approved by DEQ.
3. No materials may be removed from the north end crane bay between Pot Lines 6-8 until the Plan has been approved.
4. No building components may be removed if removal has the potential to compromise the integrity of the containment building. The containment building must meet all applicable requirements of 40 CFR 264 Subpart DD – Containment Buildings.
5. Neither the AOC nor the Plan, once approved by DEQ, are intended to permit CFAC and Calbag Resources, LLC. (Calbag) to leave hazardous waste from the Pot Room building on the CFAC property. Additional cleanup may be required under other regulatory authorities.

Steve Wright and Cliff Boyd
CFAC Plan Review
